AI Security Findings

Overall risk: LOW | Total findings: 2

Executive summary

Risk overview

Total findings: 2. Critical: 0, High: 0, Medium: 0, Low: 0.

Technical summary

[
{
"source_file": "/tmp/tmpvpj7ln41/src/src/main.py",
"findings": [
{
"issue": "Hardcoded credentials found in source code",
"description": "Credentials are hardcoded in main.py, risk of exposure if source code is leaked.",
"severity": "High",
"recommendation": "Remove hardcoded credentials, use environment variables or secret management solutions."
},
{
"issue": "Lack of input validation",
"description": "User input is not properly validated or sanitized, potential injection attacks.",
"severity": "High",
"recommendation": "Implement strict input validation and sanitization to prevent injection vulnerabilities."
},
{
"issue": "Logging sensitive information",
"description": "Sensitive data such as tokens or passwords are logged in plaintext.",
"severity": "Medium",
"recommendation": "Sanitize logs to avoid recording sensitive information."
}
]
},
{
"source_file": "/tmp/tmpvpj7ln41/src/src/utils.py",
"findings": [
{
"issue": "Use of weak cryptographic algorithms",
"description": "utils.py uses outdated or weak cryptographic functions.",
"severity": "High",
"recommendation": "Update to modern, vetted cryptographic libraries and algorithms."
},
{
"issue": "Improper error handling exposing stack traces",
"description": "Errors expose stack traces that can leak sensitive implementation details.",
"severity": "Medium",
"recommendation": "Implement proper error handling and avoid exposing stack traces in production."
